CONCRETE REPAIR

Concrete, Masonry, and Waterproofing at 171 Newbury Street Boston, MA

Description: Various concrete, masonry, and waterproofing repairs on a four-story building. Multiple structural beams needed full or partial replacement. Waterproofing membrane was applied to a section of slab that was exposed to the elements but was the roof to a section of the basement unit, then was covered with new brick pavers. Multiple overhead concrete repairs were performed. Aulson also completely demolished the basement's existing concrete slab and self leveling cement over the elevated, sub basement's concrete slab and poured a new 5000 PSI concrete slab and self leveling material, which both are currently serving as the finished flooring in the unit.

Owner: Supporting Strategies
